I strongly believe that the combination of my natural ability, personality and work experience all make me an ideal candidate for this role. Moreover, I have gained insight into different levels of computer, lab/library management. As an innovator, I would love to join your company to improve my skills and knowledge when it comes to electronic/technology innovation. I like working with a reputable company and gaining further experience. Furthermore, I am good at solving problems and I have a great deal of experience with programming languages including C++ and MATLAB. I am also into new technologies and working with new technologies. I can operate anything related to technology easily. I can run both Windows and Mac operating systems.

Currently, I am pursuing a Bachelor's degree in Computer Science at Wayne State University. I expect to graduate around June 2019. I have taken several programming classes. In reference to C++ and MATLAB, I have created many programs, which include Temperature Converter different methods, airplane setting chart and several more. I also have experience with formatting the output. I have experience with network troubleshooting and C++ classes and structs. I have separate codes in .cpp and .h files. Once in class, we had a scavenger hunt and we had to code the nearest campus parking structure from a particular building. We gathered data, averaged footsteps, and the distance from the building to each parking structure, the time it takes, etc. One of my tasks was to write a code to calculate the distance from each parking structure to the building. After everything, we combined all the codes and came up with the C++ program for the nearest parking structure. I also have skills with troubleshooting, installing and repairing software. In my previous job, I had to deal with all those issues. That experience enhanced my skills and gave me a solid background on how to deal with such problems.

I am also involved in online learning. I know some great computer science and IT related online platforms which offer courses for free but provides a certification for a little amount of money. I have taken network troubleshooting course and computer networking online and got a certificate for successfully completing it. I am also good with web development (HTML5, CSS, JavaScript).

My resume is enclosed for your review. Given my experience and skill set, I believe I would be an ideal candidate for this position. I would appreciate your consideration for this employment opportunity. Thank you for taking the time to review my credentials and experience.

Sincerely,
Noman Haider
